SET 6: THE BELET DUNES ORGANOPHOTOVOLTAIC SOLAR GRID & ENERGY STORAGE DEPOT

DOCUMENT 6B: BORROWER'S Q3 2146 QUARTERLY REPORTING PACKAGE & VALUATION MEMO

To: Sol System Energy Consortium (SSEC), as Administrative Agent

From: Belet Energy Infrastructure Partners LP (Borrower)

Date: October 20, 2146

Subject: Q3 2146 Financial Compliance Report & Asset Valuation Analysis

1. Financial and Operational Narrative

During the third quarter of 2146, the Belet Dunes facility operated in compliance with all covenants and technical metrics detailed in the Secured Credit Agreement (Document 6A). The photovoltaic collector arrays maintained high molecular stability, posting a quarterly average **Solar Conversion Efficiency Index (SCEI)** of 93.1%, which comfortably exceeds the 89.0% baseline standard specified in Section 4.01(1).

Energy delivery volumes averaged 21,450 Megawatt-hours (MWh) equivalent per Titan sidereal cycle, meeting the **Solar Power Tariff Target** of 20,000 MWh outlined in Section 4.01(2). Consequently, the Facility Loans accrued interest at the baseline interest rate of **TIDOR plus 6.75%** per annum, with no triggers of the Dynamic Siphon Charge Premium. In addition, our escrow balances in the **Helium-Pressurized Sinking Fund** and the **Regolith Stabilisation Escrow** were fully maintained at SC 200,000,000 and SC 400,000,000 respectively, satisfying all requirements of Sections 4.01(3) and 4.01(4).

3. Manager's Valuation Memo

Valuation Methodology: The Belet Dunes Organophotovoltaic Solar Grid is valued utilizing a Discounted Cash Flow (DCF) model reflecting outer-rim photovoltaic dust and thermal degradation risk profiles. Key structural assumptions include a Weighted Average Cost of Capital (WACC) of 11.00% and array polymer material decay over a 15-year projected operational lifespan.
