Manager’s Valuation Memorandum

TO: Investment Committee, United Jovian Credit Corp.

FROM: Jovian Valuation Advisory Partners LLC

DATE: June 26, 2026

PROPERTY: Thalassa Hydrothermal Rift Resort (Under-Ice Sector 4G)

1. Valuation Summary & Parameters

We have updated the valuation of the Thalassa Hydrothermal Rift Resort using a multi-period Discounted Cash Flow (DCF) methodology. The analysis reflects Q2 performance margins, adjusted offworld traffic projection curves, and current risk parameters associated with radiation and seismic shifts.

Parameter	Underwriting Base Value	Rationale
Assumed Holding Period	10 Jovian Years (approx. 11.8 Earth Years)	Aligned with life cycle of primary energy siphons
Base Discount Rate (WACC)	11.50%	Includes 2.0% regional risk premium for sub-ice assets
Terminal Cap Rate	8.25%	Derived from capital transactions in Jupiter orbit
Appraised Capitalization Value	**1,155,000,000 ECU**	Increase of 3.12% from Q1 evaluation

2. Capital Expenditure (CapEx) Analysis

Due to the aggressive mechanical wear associated with deep-water chemical interactions at the hydrothermal rifts, the annual CapEx sinking reserve is modeled at 4.5% of total revenues, as compared to the typical 2.0% standard for lunar or orbital properties. This allocation supports preventative maintenance of the heat exchangers without disrupting cash flow stability.

Valuation Conclusion: The collateral property displays robust asset health. The LTV of 64.93% provides adequate security cushion against extreme tectonic events or regulatory alignment changes.
